

I urge you to reconsider your support for BPL licensure. This is a broadband technology, which by operators' own admissions is not "radio silent" and will without question cause massive and continuous violations of your own very appropriate Part 15 rules. Please do the right thing for our country and shelve plans for BPL until such time as BPL installations can be PROVEN to not adversely affect communications by and between FCC LICENSED entities. To date, evidence from existing BPL operations run contrary to this conclusion.
